

Instructions for Use

This document contains the Federally approved air pollution regulations of the Kansas Department of Health and Environment (KDHE), codified by the state as Article 19—Ambient Air Quality Standards and Air Pollution Control. In addition, it includes other regulatory requirements (orders, permits, etc.) as well as the regulations of the local authority in Kansas City, Wyandotte County. All have been approved by the EPA pursuant to the Clean Air Act (CAA) and, as such, are Federally enforceable. This document contains rules approved as part of the State Implementation Plan (SIP), rules approved pursuant to section 111(d), rules approved pursuant to section 112(l), and the approved Title V regulations.

Following each regulation is a historical record of EPA's actions approving or disapproving all or part of the rule. The entries begin with the most current revision to the rule. The following explanation of the entries may be helpful to you:

CFR - The citation in the Code of Federal Regulations which approved the rule or rule revision as part of this SIP.

NOTE: On February 12, 1999, the Region restructured 40 CFR Part 52, Subpart R, for the state of Kansas. For citations in this compilation to 40 CFR 52.870 prior to this date, the reader should now refer to 40 CFR 52.875. (See 64 FR 7091.)

FRM - The citation and date of the EPA's final rulemaking as published in the Federal Register.

PRM - The citation and date of the EPA's proposed rulemaking as published in the Federal Register. In some instances, no proposal was published.

State Submission - The date of the letter from the Governor or his designated representative submitting the rule or rule revision as part of the SIP.

State Effective Date - For state regulations after a final rule is signed by the secretary of KDHE, it is published in the Kansas Register. It is effective 45 days later. The date used is either the date the rule was published in the Kansas Register or the date the rule was effective.

APDB File -	The file in the Air Planning and Development Branch (APDB) which contains the relevant documentation.
Description -	A description of the EPA's action on the state's submission.
Difference Between State (Local) and the EPA-Approved Regulation	To the extent possible, a description of the difference between the state (local) version of the rule and the Federally approved regulation is given.

Many of these regulations have been approved piecemeal as part of the SIP. Where the state never submitted a change or where the EPA disapproved (or did not act on) a revision, the result can be a Federally approved rule with sections, paragraphs, and/or language missing, as well as internal numbering that appears inappropriate. Efforts are being made to resolve these discrepancies. However, such problems will remain where the EPA and the state have firm differing opinions on a regulatory issue. For a current version of a state or local rule, you should consult the appropriate state or local agency.

When the EPA approves a regulatory change to the SIP, the Air Planning and Development Branch will provide you with an updated version of the complete rule within 60 days of the effective date of the EPA's action.

Finally, any errors in this document should be brought to the attention of the SIP Coordinator (913/551-7020) in the Air Planning and Development Branch.
